Documents cited in the International Search Report:

D1: US4693561 A

D2: EP0434139 A

Document D1 discloses an amorphous silicon spatial light modulator with a three electrode structure. An object of the D1 invention is to control the shape of the electric field in a thin amorphous silicon layer and a liquid crystal filling space.

Document D2 discloses a tunable optical waveguide device comprising a deformable gel layer. The object of the D2 invention is to achieve active phase matching for frequency doubling.

The cited documents represent the general state of the art. The invention defined in claims 1-12 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed electrically controlled light modulator device with an electric field enhancement electrode structure. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-12 is novel and is considered to involve an inventive step. The invention is industrially applicable.
